

Sentinel X100 Quick Test Kit

On-site confirmation of Sentinel X100 Inhibitor level

The Sentinel X100 Test Kit is a simple way to check that a system treated with Sentinel X100 Inhibitor has been dosed to the correct level for proper protection against limescale and corrosion; two of the main culprits of system issues and breakdown.

- **Indicates correct levels of Sentinel X100 Inhibitor**
Provides confidence that there is sufficient X100 in the system to ensure full protection
- **Quick and simple on-site confirmation of X100 levels**
Easy visual test performed in minutes
- **Clear colour change**
Can easily distinguish between systems with and without sufficient X100 levels

The Sentinel System

Lifetime protection for heating and hot water systems using the best practice process of...

TEST KIT

Application

1. If Sentinel X100 has just been added to the system, allow it to circulate for at least one hour before carrying out the test so that the product is distributed evenly throughout the entire circuit.
2. Add system water to the tube, filling to a level just above the 5ml mark.
3. Place a No 1 tablet and a No 2 tablet into the test tube.
4. Cap the tube and shake vigorously to dissolve.
5. Wait 10 minutes.
6. Hold the tube horizontally over the 'White Band' and compare to the 'Standard' yellow band.
7. If the colour is deeper or same depth of colour than the 'Standard' yellow band, the system treatment is satisfactory.
8. If the colour is lighter add more Sentinel X100 to the system, allow to circulate and repeat the test

Test Kit Contents

- 1 Test Tube
- 2 Sentinel No 1 Tablets
- 2 Sentinel No 2 Tablets
- 1 Colour Comparison Chart

The use of Sentinel water treatment is endorsed by the industry's major international manufacturing companies*
